

The diagram illustrates the intersection of two planes, π' and π'' , in a two-view projection system. The horizontal axis is labeled ℓ'' and the vertical axis is labeled ℓ' . The plane π' is represented by a line with a slope of 1/4, and the plane π'' is represented by a line with a slope of 1/2. The intersection of the two planes is shown as a line segment. The intersection point is labeled B in the ℓ' view and B'' in the ℓ'' view. The intersection line is labeled AB in the ℓ' view and $A'B''$ in the ℓ'' view. The intersection line is perpendicular to the line AB in the ℓ' view, as indicated by a right-angle symbol. The intersection line is also perpendicular to the line $A'B''$ in the ℓ'' view, as indicated by a right-angle symbol. The intersection line is labeled AB in the ℓ' view and $A'B''$ in the ℓ'' view. The intersection line is labeled AB in the ℓ' view and $A'B''$ in the ℓ'' view. The intersection line is labeled AB in the ℓ' view and $A'B''$ in the ℓ'' view.
