

The diagram illustrates the construction of the orthogonal projection of a line segment AB onto a plane α . The plane α is represented by a line labeled α . The segment AB is shown with point A above the plane and point B below it. A line perpendicular to the plane α is drawn through point A , intersecting the plane at point A' . This line is labeled AA' and has a right-angle symbol at A' . The projection of point B onto the plane is point B' , which is the intersection of the line segment AB and the plane α . The segment $A'B'$ represents the projection of the segment AB onto the plane α . The diagram also shows the projection of the endpoints A and B onto the plane, labeled A' and B' respectively. The segment $A'B'$ is the projection of the segment AB onto the plane α .
