

The diagram shows a right-angled triangle \$B'AC\$ where \$A\$ is at the top-left corner, \$C\$ is at the bottom-right corner, and \$B'\$ is at the top-right corner. The right angle is at \$A\$. A horizontal line segment \$AC\$ has length \$l\$, and a vertical line segment \$AB'\$ has height \$h\$. A point \$Cx\$ is located on the base \$AC\$, representing the center of mass. A vertical line labeled \$x-x\$ passes through \$Cx\$. An inset shows a small square indicating the right angle at \$A\$.
